CHALLENGE OVERVIEW

Eliminating Friction and Delay in B2C Support

Modern business-to-consumer (B2C) enterprises face a critical bottleneck in customer retention due to systemic inefficiencies in traditional support models.

Operational support costs are rising 15% year-over-year, driven by high agent turnover and massive offshore call centers. Customer experience is heavily fragmented across email, social media, and live chat, creating siloed data.

Agents spend **40% of their active time** searching for customer context rather than resolving core issues. This structural delay damages brand loyalty and fundamentally hurts the bottom line.

THE MARKET MANDATE

Context-Aware Automation

Eliminating multi-channel delays to operate at the instant speed of modern consumers.

MUKISOFT ASSIST ARCHITECTURE

Instant, Humanized AI Automation for Customer Support

MukiSoft Assist

80%

Automated Support Deflection

Tier 1 & Tier 2 Routine Inquiries

Resolves complex inquiries—such as order modifications, refund processing, and troubleshooting—with zero latency and no human escalation.

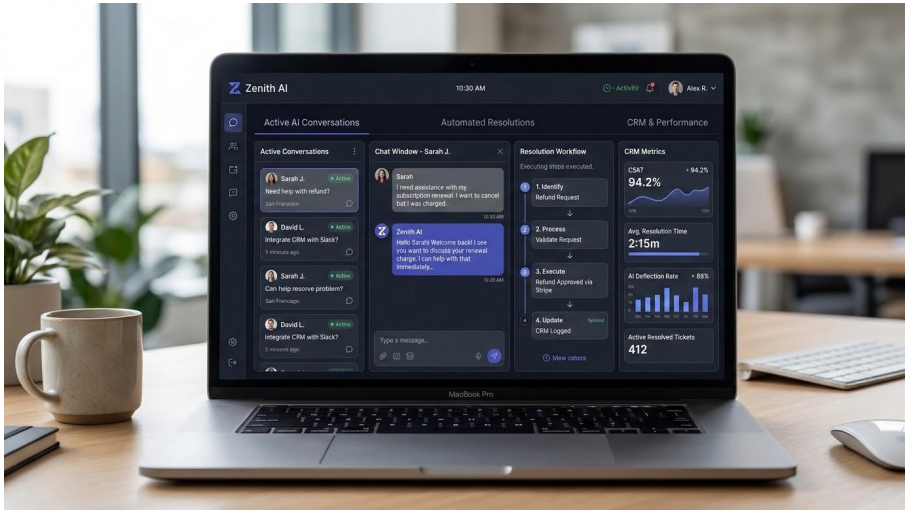

Context-Aware NLP & Sentiment Analysis

Delivers humanized responses adapted in real-time to user intent and emotional state. Dynamically syncs with enterprise knowledge bases and CRM platforms.

Personalizes interactions based on historical purchase data and individual customer preferences.

UNIFIED MULTI-CHANNEL INTELLIGENCE LAYER

- WEB CHAT
- WHATSAPP
- INSTAGRAM
- EMAIL
- CRM PLATFORMS
- KNOWLEDGE BASE

Operational Impact & Consumer Experience

- **Zero-Latency Execution:** Instant response times adapted dynamically to emotional state and customer intent.
- **Overhead Reduction:** Minimizes support costs while elevating satisfaction to unprecedented levels of efficiency.

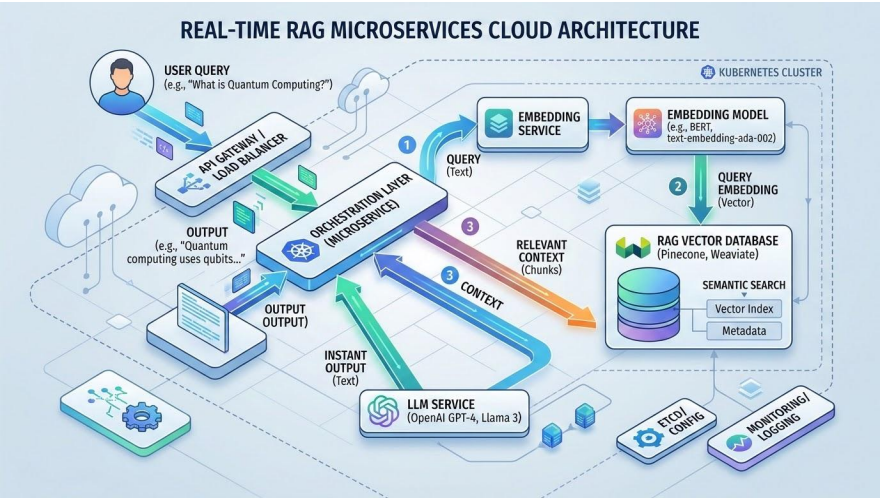

Technical Architecture Showcase

Ostad YUNet AIgnite 2026 Prototype

MukiSoft Assist

Engineered for high reliability and speed, our scalable microservices framework uses an advanced LLM orchestration layer to dynamically route queries.

With Retrieval-Augmented Generation (RAG) and vector search, AI outputs remain strictly grounded in proprietary data, while automated load balancing ensures uninterrupted service during high-traffic enterprise events.

Core Microservices Architecture

- LLM Orchestration
- RAG Grounding Layer
- Vector DB Search
- Automated Load Balancer
- Embedding Pipeline

PROJECTED GROSS MARGIN AT SCALE

Business Model & Unit Economics

MukiSoft Assist operates on a highly scalable B2C SaaS model with tiered subscription plans structured around query volume and custom integration requirements. Favorable unit economics stem from the low marginal cost of API-driven AI interactions.

Led by **Mukitu Islam Nishat**, our team brings deep technical expertise and strategic vision to capture market share across fast-growing e-commerce sectors.

Seed Funding Opportunity: Seeking seed capital to accelerate our go-to-market rollout, expand core engineering, and execute pilot programs with mid-market e-commerce brands.

12-MONTH PRODUCT ROADMAP

MILESTONE 01

Native Integrations

Expanding native connectors to Shopify and Salesforce ecosystems.

MILESTONE 02

Predictive Analytics

Launching predictive intelligence dashboards for support managers.

MILESTONE 03

Voice AI Capabilities

Implementing real-time voice-based conversational AI support.
